Home Assignment 02: Deploy Your Quiz
Points: 5

1 Main Task

It is time to deploy your first smart contract on the *(not)* UniMa chain. From the last assignment, we noticed that you like quizzes, so this time you create one of your own liking.

Contract files: `MyQuiz`, `BaseAssignment` *(dependency of MyQuiz)*

Validator Contract: 0xc1251387b24B08FD3B2613186e638F97DBF9C8C1

Specifications

a) Copy the contract files in your Hardhat development environment (adjust the path of the import if necessary).

b) Create a deploy script (or an ignition module) that instantiates the `MyQuiz` contract with at least 5 questions and five answers on a topic of your choice.

c) Publish the contract on the *(not)* UniMa blockchain.

d) Optional. Share the address of your contract in the group chat so that other people can have fun answering your questions.

e) Note: You don't have to modify the `MyQuiz` contract, it's ready to be published (it also includes the address of the validator).

f) Note2: The `MyQuiz` contract is similar but not exactly the same as the `Quiz` contract of Assignment 1.
